

# After You Read Answers

## **(Page 392) Section 14.1 After You Read Answers**

### **Review Key Concepts**

1. The server backup process involves transmitting a backup copy of a specific set of data to a different place such as a tape, CD-ROM, another hard drive, or over the Internet to a remote location, thereby protecting the data from a disaster that might occur at the source location.
2. Storage maintenance may include using hot-swappable drives, or hard drive mirroring. Creating backups is an important part of protecting important data.

### **Review Key Concepts**

1. Technical documentation provides useful information about the Web site. It can be used by Webmasters or system administrators to perform some technical process. Or it can provide specific instructions to help Web site users or developers complete a process.
2. Web site administrators encounter ethical considerations when deciding if files can be uploaded to the Web server, including what is appropriate and inappropriate material.
