Preface	vii
Acknowledgments	xi
Introduction	1
I.1 What is Econometrics? 1	
I.2 Why a Separate Discipline? 2	
I.3 Methodology of Econometrics 2	
I.4 Types of Econometrics 9	
I.5 Mathematical and Statistical Prerequisites 10	
I.6 The Role of the Computer 10	
I.7 Suggestions for Further Reading 10	
 PART 1 Single-Equation Regression Models	
1. The Nature of Regression Analysis	15
1.1 Historical Origin of the Term Regression 15	
1.2 The Modern Interpretation of Regression 15	
1.3 Statistical versus Deterministic Relationships 19	
1.4 Regression versus Causation 19	
1.5 Regression versus Correlation 20	
1.6 Terminology and Notation 20	
1.7 The Nature and Sources of Data for Economic Analysis 21	
<i>Summary and Conclusions</i> 28	
<i>Multiple Choice Questions</i> 29	
<i>Exercises</i> 32	
<i>Key to Multiple Choice Questions</i> 37	
2. Two-Variable Regression Analysis: Some Basic Ideas	38
2.1 A Hypothetical Example 38	
2.2 The Concept of Population Regression Function (PRF) 41	
2.3 The Meaning of the Term Linear 42	
2.4 Stochastic Specification of PRF 43	

2.5	The Significance of the Stochastic Disturbance Term	45
2.6	The Sample Regression Function (SRF)	46
2.7	Illustrative Examples	49
	<i>Summary and Conclusions</i>	51
	<i>Multiple Choice Questions</i>	51
	<i>Exercises</i>	54
	<i>Key to Multiple Choice Questions</i>	60
3.	Two-Variable Regression Model: The Problem of Estimation	61
3.1	The Method of Ordinary Least Squares	61
3.2	The Classical Linear Regression Model: The Assumptions Underlying the Method of Least Squares	67
3.3	Precision or Standard Errors of Least-Squares Estimates	74
3.4	Properties of Least-Squares Estimators: The Gauss–Markov Theorem	76
3.5	The Coefficient of Determination r^2 : A Measure of “Goodness of Fit”	78
3.6	A Numerical Example	83
3.7	Illustrative Examples	86
3.8	A Note on Monte Carlo Experiments	88
	<i>Summary and Conclusions</i>	89
	<i>Multiple Choice Questions</i>	90
	<i>Exercises</i>	93
	<i>Key to Multiple Choice Questions</i>	99
	<i>Appendix 3A</i>	100
4.	Classical Normal Linear Regression Model (CNLRM)	105
4.1	The Probability Distribution of Disturbances u_i	105
4.2	The Normality Assumption for u_i	106
4.3	Properties of OLS Estimators under the Normality Assumption	107
4.4	The Method of Maximum Likelihood (ML)	109
	<i>Summary and Conclusions</i>	110
	<i>Appendix 4A</i>	113
5.	Two-Variable Regression: Interval Estimation and Hypothesis Testing	115
5.1	Statistical Prerequisites	115
5.2	Interval Estimation: Some Basic Ideas	115
5.3	Confidence Intervals for Regression Coefficients β_1 and β_2	117
5.4	Confidence Interval for σ^2	119
5.5	Hypothesis Testing: General Comments	120
5.6	Hypothesis Testing: The Confidence-Interval Approach	121
5.7	Hypothesis Testing: The Test-of-Significance Approach	122
5.8	Hypothesis Testing: Some Practical Aspects	127
5.9	Regression Analysis and Analysis of Variance	131
5.10	Application of Regression Analysis: The Problem of Prediction	133
5.11	Reporting the Results of Regression Analysis	136
5.12	Evaluating the Results of Regression Analysis	137
	<i>Summary and Conclusions</i>	140
	<i>Multiple Choice Questions</i>	141
	<i>Exercises</i>	146

Key to Multiple Choice Questions 154

Appendix 5A 155

6. Extensions of the Two-Variable Linear Regression Model **159**

- 6.1 Regression through the Origin 159
- 6.2 Scaling and Units of Measurement 166
- 6.3 Regression on Standardized Variables 170
- 6.4 Functional Forms of Regression Models 171
- 6.5 How to Measure Elasticity: The Log-Linear Model 172
- 6.6 Semilog Models: Log-Lin and Lin-Log Models 175
- 6.7 Reciprocal Models 179
- 6.8 Choice of Functional Form 184
- 6.9 A Note on the Nature of the Stochastic Error Term: Additive versus Multiplicative Stochastic Error Term 186

Summary and Conclusions 187

Multiple Choice Questions 188

Exercises 190

Key to Multiple Choice Questions 196

Appendix 6A 197

7. Multiple Regression Analysis: The Problem of Estimation **203**

- 7.1 The Three-Variable Model: Notation and Assumptions 203
- 7.2 Interpretation of Multiple Regression Equation 205
- 7.3 The Meaning of Partial Regression Coefficients 205
- 7.4 OLS and ML Estimation of the Partial Regression Coefficients 207
- 7.5 The Multiple Coefficient of Determination R^2 and the Multiple Coefficient of Correlation R 210
- 7.6 An Illustrative Example 212
- 7.7 Simple Regression in the Context of Multiple Regression: Introduction to Specification Bias 214
- 7.8 R^2 and the Adjusted R^2 215
- 7.9 The Cobb-Douglas Production Function: More on Functional Form 220
- 7.10 Polynomial Regression Models 223
- *7.11 Partial Correlation Coefficients 226

Summary and Conclusions 228

Multiple Choice Questions 228

Exercises 231

Key to Multiple Choice Questions 243

Appendix 7A 243

8. Multiple Regression Analysis: The Problem of Inference **249**

- 8.1 The Normality Assumption Once Again 249
- 8.2 Hypothesis Testing in Multiple Regression: General Comments 250
- 8.3 Hypothesis Testing about Individual Regression Coefficients 251
- 8.4 Testing the Overall Significance of the Sample Regression 253
- 8.5 Testing the Equality of Two Regression Coefficients 262
- 8.6 Restricted Least Squares: Testing Linear Equality Restrictions 264
- 8.7 Testing for Structural or Parameter Stability of Regression Models: The Chow Test 270

8.8	Prediction with Multiple Regression	275
8.9	The Troika of Hypothesis Tests: The Likelihood Ratio (LR), Wald (W), and Lagrange Multiplier (LM) Tests	275
8.10	Testing the Functional Form of Regression: Choosing between Linear and Log-Linear Regression Models	276
	<i>Summary and Conclusions</i>	278
	<i>Multiple Choice Questions</i>	278
	<i>Exercises</i>	281
	<i>Key to Multiple Choice Questions</i>	292
	<i>Appendix 8A</i>	292

9. Dummy Variable Regression Models 295

9.1	The Nature of Dummy Variables	295
9.2	ANOVA Models	296
9.3	ANOVA Models with Two Qualitative Variables	300
9.4	Regression with a Mixture of Quantitative and Qualitative Regressors: The ANCOVA Models	302
9.5	The Dummy Variable Alternative to the Chow Test	303
9.6	Interaction Effects Using Dummy Variables	306
9.7	The Use of Dummy Variables in Seasonal Analysis	307
9.8	Piecewise Linear Regression	311
9.9	Panel Data Regression Models	314
9.10	Some Technical Aspects of the Dummy Variable Technique	314
9.11	Topics for Further Study	316
9.12	A Concluding Example	316
	<i>Summary and Conclusions</i>	320
	<i>Multiple Choice Questions</i>	320
	<i>Exercises</i>	324
	<i>Key to Multiple Choice Questions</i>	332
	<i>Appendix 9A</i>	332

PART 2 Relaxing the Assumptions of the Classical Model

10. Multicollinearity: What Happens If the Regressors are Correlated? 339

10.1	The Nature of Multicollinearity	340
10.2	Estimation in the Presence of Perfect Multicollinearity	342
10.3	Estimation in the Presence of “High” but “Imperfect” Multicollinearity	344
10.4	Multicollinearity: Much Ado about Nothing? Theoretical Consequences of Multicollinearity	344
10.5	Practical Consequences of Multicollinearity	346
10.6	An Illustrative Example	351
10.7	Detection of Multicollinearity	356
10.8	Remedial Measures	360
10.9	Is Multicollinearity Necessarily Bad? Maybe Not, If the Objective Is Prediction Only	365
10.10	An Extended Example: The Longley Data	365
	<i>Summary and Conclusions</i>	368

Multiple Choice Questions 369

Exercises 372

Key to Multiple Choice Questions 385

11. Heteroscedasticity: What Happens if the Error Variance is Nonconstant? 386

11.1 The Nature of Heteroscedasticity 386

11.2 OLS Estimation in the Presence of Heteroscedasticity 391

11.3 The Method of Generalized Least Squares (GLS) 392

11.4 Consequences of Using OLS in the Presence of Heteroscedasticity 395

11.5 Detection of Heteroscedasticity 397

11.6 Remedial Measures 410

11.7 Concluding Examples 416

11.8 A Caution about Overreacting to Heteroscedasticity 420

Summary and Conclusions 421

Multiple Choice Questions 421

Exercises 424

Key to Multiple Choice Questions 432

Appendix 11A 432

12. Autocorrelation: What Happens if the Error Terms are Correlated? 436

12.1 The Nature of the Problem 437

12.2 OLS Estimation in the Presence of Autocorrelation 443

12.3 The BLUE Estimator in the Presence of Autocorrelation 445

12.4 Consequences of Using OLS in the Presence of Autocorrelation 446

12.5 Relationship between Wages and Productivity in the Business Sector of the United States, 1960–2005 451

12.6 Detecting Autocorrelation 453

12.7 What to do when you find Autocorrelation: Remedial Measures 463

12.8 Model Mis-Specification versus Pure Autocorrelation 463

12.9 Correcting for (Pure) Autocorrelation: The Method of Generalized Least Squares (GLS) 464

12.10 The Newey–West Method of Correcting the OLS Standard Errors 470

12.11 OLS versus FGLS and HAC 470

12.12 Additional Aspects of Autocorrelation 471

12.13 A Concluding Example 472

Summary and Conclusions 474

Multiple Choice Questions 475

Exercises 478

Key to Multiple Choice Questions 490

Appendix 12A 491

13. Econometric Modeling: Model Specification and Diagnostic Testing 492

13.1 Model Selection Criteria 493

13.2 Types of Specification Errors 493

13.3 Consequences of Model Specification Errors 495

13.4 Tests of Specification Errors 499

13.5 Errors of Measurement 506

13.6	Incorrect Specification of the Stochastic Error Term	510
13.7	Nested versus Non-Nested Models	510
13.8	Tests of Non-Nested Hypotheses	511
13.9	Model Selection Criteria	516
13.10	Additional Topics in Econometric Modeling	520
13.11	Concluding Examples	524
13.12	Non-Normal Errors and Stochastic Regressors	533
13.13	A Word to the Practitioner	535
	<i>Summary and Conclusions</i>	536
	<i>Multiple Choice Questions</i>	537
	<i>Exercises</i>	540
	<i>Key to Multiple Choice Questions</i>	546
	<i>Appendix 13A</i>	546

PART 3 Topics in Econometrics

14. Nonlinear Regression Models	553
14.1 Intrinsically Linear and Intrinsically Nonlinear Regression Models	553
14.2 Estimation of Linear and Nonlinear Regression Models	555
14.3 Estimating Nonlinear Regression Models: The Trial-and-Error Method	555
14.4 Approaches to Estimating Nonlinear Regression Models	557
14.5 Illustrative Examples	558
<i>Summary and Conclusions</i>	562
<i>Multiple Choice Questions</i>	563
<i>Exercises</i>	565
<i>Key to Multiple Choice Questions</i>	566
<i>Appendix 14A</i>	567
15. Qualitative Response Regression Models	570
15.1 The Nature of Qualitative Response Models	570
15.2 The Linear Probability Model (LPM)	572
15.3 Applications of LPM	578
15.4 Alternatives to LPM	581
15.5 The Logit Model	582
15.6 Estimation of the Logit Model	584
15.7 The Grouped Logit (Glogit) Model: A Numerical Example	587
15.8 The Logit Model for Ungrouped or Individual Data	590
15.9 The Probit Model	594
15.10 Logit and Probit Models	599
15.11 The Tobit Model	602
15.12 Modeling Count Data: The Poisson Regression Model	604
15.13 Further Topics in Qualitative Response Regression Models	607
<i>Summary and Conclusions</i>	609
<i>Multiple Choice Questions</i>	610
<i>Exercises</i>	613
<i>Key to Multiple Choice Questions</i>	620
<i>Appendix 15A</i>	620

16. Panel Data Regression Models	622
16.1 Why Panel Data? 623	
16.2 Panel Data: An Illustrative Example 624	
16.3 Pooled OLS Regression or Constant Coefficients Model 625	
16.4 The Fixed Effect Least-Squares Dummy Variable (LSDV) Model 627	
16.5 The Fixed-Effect Within-Group (WG) Estimator 630	
16.6 The Random Effects Model (REM) 633	
16.7 Properties of Various Estimators 637	
16.8 Fixed Effects versus Random Effects Model: Some Guidelines 637	
16.9 Panel Data Regressions: Some Concluding Comments 638	
16.10 Some Illustrative Examples 639	
<i>Summary and Conclusions</i> 644	
<i>Multiple Choice Questions</i> 645	
<i>Exercises</i> 648	
<i>Key to Multiple Choice Questions</i> 651	
17. Dynamic Econometric Models: Autoregressive and Distributed-Lag Models	652
17.1 The Role of “Time,” or “Lag,” in Economics 653	
17.2 The Reasons for Lags 657	
17.3 Estimation of Distributed-Lag Models 658	
17.4 The Koyck Approach to Distributed-Lag Models 659	
17.5 Rationalization of the Koyck Model: The Adaptive Expectations Model 664	
17.6 Another Rationalization of the Koyck Model: The Stock Adjustment, or Partial Adjustment, Model 666	
17.7 Combination of Adaptive Expectations and Partial Adjustment Models 668	
17.8 Estimation of Autoregressive Models 669	
17.9 The Method of Instrumental Variables (IV) 670	
17.10 Detecting Autocorrelation in Autoregressive Models: Durbin h Test 671	
17.11 A Numerical Example: The Demand for Money in Canada, 1979–I to 1988–IV 673	
17.12 Illustrative Examples 676	
17.13 The Almon Approach to Distributed-Lag Models: The Almon or Polynomial Distributed Lag (PDL) 679	
17.14 Causality in Economics: The Granger Causality Test 686	
<i>Summary and Conclusions</i> 692	
<i>Multiple Choice Questions</i> 693	
<i>Exercises</i> 696	
<i>Key to Multiple Choice Questions</i> 705	
<i>Appendix 17A</i> 705	

PART 4 Simultaneous-Equation Models and Time Series Econometrics

18. Simultaneous-Equation Models	709
18.1 The Nature of Simultaneous-Equation Models 709	
18.2 Examples of Simultaneous-Equation Models 710	
18.3 The Simultaneous-Equation Bias: Inconsistency of OLS Estimators 715	
18.4 The Simultaneous-Equation Bias: A Numerical Example 718	
<i>Summary and Conclusions</i> 720	

<i>Multiple Choice Questions</i>	720
<i>Exercises</i>	721
<i>Key to Multiple Choice Questions</i>	725

19. The Identification Problem **726**

19.1	Notations and Definitions	726
19.2	The Identification Problem	729
19.3	Rules for Identification	736
19.4	A Test of Simultaneity	740
19.5	Tests for Exogeneity	743
	<i>Summary and Conclusions</i>	743
	<i>Multiple Choice Questions</i>	744
	<i>Exercises</i>	746
	<i>Key to Multiple Choice Questions</i>	750

20. Simultaneous-Equation Methods **751**

20.1	Approaches to Estimation	751
20.2	Recursive Models and Ordinary Least Squares	753
20.3	Estimation of a Just Identified Equation: The Method of Indirect Least Squares (ILS)	755
20.4	Estimation of an Overidentified Equation: The Method of Two-Stage Least Squares (2SLS)	758
20.5	2SLS: A Numerical Example	761
20.6	Illustrative Examples	764
	<i>Summary and Conclusions</i>	770
	<i>Multiple Choice Questions</i>	771
	<i>Exercises</i>	773
	<i>Key to Multiple Choice Questions</i>	777
	<i>Appendix 20A</i>	777

21. Time Series Econometrics: Some Basic Concepts **780**

21.1	A Look at Selected U.S. Economic Time Series	781
21.2	Key Concepts	782
21.3	Stochastic Processes	783
21.4	Unit Root Stochastic Process	787
21.5	Trend Stationary (TS) and Difference Stationary (DS) Stochastic Processes	788
21.6	Integrated Stochastic Processes	789
21.7	The Phenomenon of Spurious Regression	790
21.8	Tests of Stationarity	791
21.9	The Unit Root Test	797
21.10	Transforming Nonstationary Time Series	802
21.11	Cointegration: Regression of a Unit Root Time Series on Another Unit Root Time Series	805
21.12	Some Economic Applications	808
	<i>Summary and Conclusions</i>	811
	<i>Multiple Choice Questions</i>	812
	<i>Exercises</i>	815
	<i>Key to Multiple Choice Questions</i>	819

22. Time Series Econometrics: Forecasting	820
22.1 Approaches to Economic Forecasting	820
22.2 AR, MA, and ARIMA Modeling of Time Series Data	822
22.3 The Box–Jenkins (BJ) Methodology	824
22.4 Identification	825
22.5 Estimation of the ARIMA Model	829
22.6 Diagnostic Checking	829
22.7 Forecasting	830
22.8 Further Aspects of the BJ Methodology	831
22.9 Vector Autoregression (VAR)	831
22.10 Measuring Volatility in Financial Time Series: The ARCH and GARCH Models	838
22.11 Concluding Examples	843
<i>Summary and Conclusions</i>	845
<i>Multiple Choice Questions</i>	846
<i>Exercises</i>	848
<i>Key to Multiple Choice Questions</i>	850
Appendix D* Statistical Tables	851
Selected Bibliography	868
Index	873
