ABOUT THE AUTHOR xxi

## Introduction

FAQs For Biological Anthropology 3

*How Old Is the Planet and What Organisms Have Lived on It Over That Time?* 3

*If Life on Our Planet Has Changed So Much Over Time, What About the Planet Itself?* 6

*Have Humans Changed?* 6

*Where Did Modern Science Come From?* 7

*Where Is Uzbekistan?* 8

## Chapter 1 Introduction to Evolutionary Fact and Theory 13

Anthropology Is the Study of Human and Nonhuman Primates 15

Anthropology Is a Scientific Discipline 16

*Critical Thinking Is the Systematic Assessment of Information* 16

*The Scientific Method Is a Way of Testing Ideas About the World Around Us* 18

**Connections: That's a Fact, Jack . . . Or Is It?** 19

*Scientific Investigation Is a Collaborative Process* 21

Evolutionary Theory Is the Cornerstone of Anthropology 22

*Evolution Is Both Fact and Theory* 22

**Connections: Making a Monkey Out of You?** 22

*Early Explanations of Life Were Both Philosophical and Religious* 23

*The Scientific Revolution Opened the Door to Systematic Study of the World* 25

*Evolutionary Thought Emerged From Scientific Collaboration* 26

*Charles Darwin Proposed Natural Selection as the Mechanism of Evolution* 31

**Connections: Can You Understand Evolution and Be Religious?** 39

What We Know/Questions That Remain 40

Summary 40

Critical Thinking 41

Resources 42

References 43

## Chapter 2 Basics of Human Biology 45

The Place of Human Beings in Nature 47

*Where Do Humans Fit In?* 47

**Connections: Why Do Monkeys Look Like Little People and Our Dogs Understand Us? 47**

*How Are Relationships Among Organisms Determined? 48*

Human Morphology: The Body's Form and Structure 49

*Tissues Cover Us and Bind Us Together 49*

The Skeleton: Our Basic Form 50

*The Musculature Interacts With the Skeleton 55*

**Connections: My Bones Ache... 55**

*All Mammals Share Common Skeletal Structures 55*

Human Physiology: The Systems of the Body 57

*The Circulatory and Respiratory Systems Transport Nutrients and More 57*

*The Nervous System and Brain Control the Actions of the Body and Assess the Organism's Surroundings 58*

*The Endocrine System Regulates and Communicates Hormonal Information Throughout the Body 60*

*The Digestive System Processes Nutrients 61*

*The Reproductive System Enables Us to Produce Offspring 62*

**Connections: Whoa, Where Did That Come From? The Fascinating Development of Human Genitals 64**

*All of These Systems (and More) Are Interconnected 64*

What We Know/Questions That Remain 65

Summary 66

Critical Thinking 66

Resources 67

**Chapter 3 Introduction to Genetics and Genomics 69**

Heredity Is the Passing of Genetic Information From Generation to Generation 70

**Connections: "Gene"—What Is in a Word? 71**

DNA Is the Molecule of Heredity 72

*DNA Is Found in Cells 72*

*DNA Has a Specific Structure 73*

*DNA Has Three Main Functions 74*

**Connections: Why It Is Important to Understand What DNA Does 82**

Mendel's Basic Model of Inheritance 82

*Traits Are Passed From Generation to Generation 82*

Mendel's Work Continues to Inform Current Knowledge 84

The Relationship Between Genes and Traits Is Complex 85

*Four Ways Genes Produce Traits 86*

*Are There Specific Genes for Certain Diseases? 87*

*Most DNA Doesn't Appear to Do Anything! 87*

Does DNA Cause Certain Behaviors? 88

**Connections: My Genes Made Me Do It! 88**

Population Genetics Helps Us Understand Evolution 89

What We Know/Questions That Remain 90

Summary 91

Critical Thinking 91

## Chapter 4 Modern Evolutionary Theory 95

Evolutionary Change Occurs In Populations In Four Ways	96
<i>Mutations Are Changes in the DNA</i>	98
<i>Gene Flow Is the Movement of Alleles Within and Between Populations</i>	99
<i>Genetic Drift Is a Change in Allele Frequency Across Generations Due to Random Factors</i>	100
<i>Current Concepts of Natural Selection Involve an Understanding of Genetics</i>	101
<b>Connections: Survival of the Fittest? Not Really</b>	104
<i>The Four Core Processes Do Not Explain All Change</i>	105
Speciation Is the Process by Which New Species Arise	108
<i>Species Can Be Defined in Many Ways</i>	108
<b>Connections: Species, Schmeecies . . . I Know One When I See It and So Do They</b>	109
<i>Subspecies Are Divisions Within a Species</i>	110
Phyletic Gradualism and Punctuated Equilibrium: Different Paces of Change	111
Similarities Can Result From Either Parallel or Convergent Evolution	112
Biodiversity in Evolution: Why We Should Care About Biological Variation	113
<b>Connections: Why Conserve Stuff Anyway?</b>	114
What We Know/Questions That Remain	115
Summary	115
Critical Thinking	116
Resources	117
References	117

## Chapter 5 Primate Behavioral Ecology 119

Comparative Primatology Provides Insights Into Modern Human Behavior	120
<i>The Living Primates Are Widespread and Diverse</i>	120
<i>Comparing the Primates Helps Us Understand Behavior</i>	127
<b>Connections: Monkey See, Monkey Do, and Humans Too?</b>	129
<i>To Study Behavior, We Have to Measure It</i>	129
<i>Specific Methodologies Are Used to Measure Primate Behavior</i>	129
<i>A Behavior Can Be Viewed From Five Perspectives</i>	130
<i>Behavior and Genetics Are Interconnected</i>	131
Behavioral Ecology Provides the Basis for Evolutionary Investigations of Behavior	132
<i>Socioecological Pressures Affect Organisms in Five Areas</i>	132
<i>Success of a Behavioral Adaptation Is Measured in Terms of Energy Costs and Benefits</i>	133
<i>Reality Is More Complex Than Suggested by Cost-Benefit Analyses</i>	135
<b>Connections: Are All Men Jerks?</b>	136
General Behavior Patterns in the Living Primates	137
<i>Mother-Infant Bonds Are the Core of Primate Societies</i>	137
<i>There Are a Few Primary Grouping Patterns in Primates</i>	138
<i>Affiliation and Grooming Are Important in Primate Societies</i>	138
<i>Hierarchies and Dominance Help Structure Primate Societies</i>	139

<i>Dispersal and Life History Patterns Are Important to Social Behavior</i>	140
<i>Cooperation and Conflict Are Integral to Primate Societies</i>	141
Social Organization in Two Nonhuman Primate Societies:	
Macaques and Chimpanzees	141
<i>Macaques: A Widespread Primate Genus</i>	141
<i>Chimpanzees: Our Closest Relatives</i>	146
Humans Are Also Primates, and Human Behavior Has an Evolutionary History	151
<i>Social Organization and Behavior in Humans</i>	152
<i>Comparisons With Macaques</i>	152
<i>Comparisons With Chimpanzees</i>	153
<i>What Is Uniquely Human?</i>	154
Connections: <i>Why We Never Shut Up</i>	154
What We Know/Questions That Remain	155
<i>Conserving the Nonhuman Primates Is a Critical Challenge</i>	156
Summary	156
Critical Thinking	157
Resources	158
References	158

## Chapter 6 Early Primate Evolution 161

Fossils Provide Direct Evidence of an Organism's Existence	162
Humans Are Members of the Order of Mammals Called Primates	165
<i>A Very Brief History of the Mammals</i>	165
Connections: <i>Homiothermy is Cool!</i>	167
<i>Primates Are Mammals With Specific Characteristics</i>	167
The Fossil Primates	168
<i>The Earliest Possible Primates Are Found in the Paleocene</i>	168
<i>Why Did Primates Evolve Out of Early Mammalian Groups?</i>	170
<i>True Primates Appear in the Eocene</i>	171
<i>Anthropoids (Simiiformes) Radiate in the Oligocene</i>	173
Connections: <i>Why Care About 30-Million-Year-Old Dead Primates?</i>	174
<i>Hominoid Primates Radiate During the Miocene</i>	176
Connections: <i>Ok, So Is Gigantopithecus Bigfoot?</i>	181
<i>Nonhominoid Anthropoid Primates Radiate During the Pliocene and Pleistocene</i>	182
Evolutionary Relationships Among These Fossil Primates Are a Matter of Debate	182
What We Know/Questions That Remain	184
Summary	184
Critical Thinking	185
Resources	185
References	186

## Chapter 7 Early Hominin Evolution 189

Connections: <i>Why Walking on Two Legs Makes Birth Painful for Mom</i>	191
Classification of Hominids/Hominins Is a Subject of Debate	191
Early Hominins Evolved Primarily in East Africa	195
<i>Early Possible Hominins</i>	196

<i>Hominins of the Middle and Late Pliocene Were Bipedal and Sexually Dimorphic</i>	200
<b>Connections: Big Guys With Small Teeth Rock!</b>	203
<i>Were There Early Hominins in Southern Africa?</i>	205
<i>Evolutionary Relationships Are Unclear</i>	205
Fossils Give Us Clues About Early Hominin Behavior	206
<i>Habitat: Where They Lived</i>	207
<i>Diet: What Did They Eat, and How Did They Get It?</i>	207
<i>Tools: Did They Use Bone, Wood, or Stone Tools?</i>	207
<i>Social Life: How Did They Live Together?</i>	208
<i>The Bipedalism That Wasn't</i>	208
<b>Connections: Hyenas, Wolves, and Saber-Toothed Cats, Oh My!</b>	209
The Evolution of Bipedality Has Several Possible Explanations	209
What We Know/Questions That Remain	211
Summary	212
Critical Thinking	213
Resources	213
References	214
<b>Chapter 8 Plio-Pleistocene Hominins and the Genus <i>Homo</i></b>	217
Changes at the Late Pliocene-Pleistocene Boundary	219
The Robust Hominins Had Unique Cranial and Dental Anatomy	220
<i>The Genus <i>Paranthropus</i>: Hominins With Massive Chewing Adaptations</i>	220
<i>Robust Hominin Behavior</i>	225
The Gracile Hominins Shared Characteristics With Both Earlier and Later Groups	226
<i>Genus <i>Australopithecus</i>: Three Plio-Pleistocene Forms</i>	226
<i>Are These <i>Australopithecines</i> Ancestral to Humans?</i>	230
<i>Early <i>Homo</i>: A New Genus Emerges</i>	231
<b>Connections: Where Is the Missing Link?</b>	232
<i>Gracile Hominin Behavior and the Advent of Biocultural Evolution</i>	235
The Genus <i>Homo</i> Diversifies: The First Humans	237
<i>A Classification Debate: One Genus but How Many Species?</i>	238
<i>Physical Characteristics of <i>H. erectus</i></i>	240
<i>Geographic Distribution of <i>H. erectus</i></i>	241
<b>Connections: Is that You Frodo? <i>Ardi</i>?</b>	243
<i>When Did Hominins Expand Beyond Africa?</i>	245
<i>Why Did Hominins Expand Beyond Africa?</i>	246
<i><i>H. erectus</i> Material Culture and the Expansion of the Biocultural Evolution</i>	246
<b>Connections: What's the Deal With Fire?</b>	250
What We Know/Questions That Remain	251
Summary	252
Critical Thinking	253
Resources	253
References	254
<b>Chapter 9 The Rise of Modern Humans</b>	257
Archaic <i>Homo Sapiens</i> and the Changing Speed of Innovation	259
<i>The Oldest Archaic Human Fossils Are Found in Africa</i>	259

*Archaic Human Fossils Are Found Across Eurasia* 261  
*Archaic Humans Are Found in China but Not in Southeast Asia* 262  
*Is Homo heidelbergensis a True Species?* 264  
*The Neanderthals Were Not as Different as First Thought, but They Were Different* 264

**Connections: I'm no Neanderthal!** 266

*Material Culture of the Archaic Humans* 267  
*Increased Complexity in Tool Use and Hunting* 267  
*Dietary and Behavior Changes Associated With New Tool Kits* 268  
*Social Patterns: High Levels of Communal Cooperation* 269  
*Postmortem Modification of Bodies* 270  
*Why Did the Neanderthals Disappear?* 270  
*The Appearance of "Anatomically Modern" Homo sapiens* 272  
*Anatomically Modern Humans Are Defined Morphologically, Not Behaviorally* 272  
*The Earliest Anatomically Modern Fossils Are Found in Africa* 273  
*The Eurasian Record Demonstrates the Spread of Modern Humans* 274  
*Material Culture Becomes Very Complex With the Appearance of Modern Humans* 277  
*Blades and Associated Industries Revolutionized the Human Tool Kit* 277  
*Changing Technologies and Behavioral Patterns Affected Diet* 279  
*Modern Humans Used Art and Symbols* 279  
**Connections: Art for Art's Sake?** 281  
*Burial of the Dead Was Ubiquitous and Postmortem Modification Common* 282  
**Connections: Why We Love Our Dogs (At Least Some of Us Do)** 282  
*Current Human Patterns Began to Emerge 20,000 Years Ago* 283  
*The Origin of Modern Humans Is a Matter of Debate* 283  
*The Case for a Recent African Origin* 284  
*The Case for Multiregional Evolution* 287  
*The Case for Multiple Dispersals* 288  
*As Usual, Reality Is Not This Clear* 289  
*What We Know/Questions That Remain* 290  
*These Models Influence the Way We Think About Human Differences* 291  
*Summary* 291  
*Critical Thinking* 292  
*Resources* 293  
*References* 293

## **Chapter 10 Human Biological Diversity in Context** 297

*A Basic Summary of Human Evolution: The Origin of Behavioral and Biological Diversity* 299  
*Humans Have Long Exhibited Biological Diversity* 300  
*A Visible but Misunderstood Variation: Skin "Color"* 301  
**Connections: Everyone Tans! But Skin Color is Still Culturally Defined** 302  
*Another Visible Difference: Body Shape and Size* 305  
*A Cornerstone of Variation Research: Skull Morphology* 307  
**Connections: Skulls Are Us?** 307  
*Sex Differences Are Seen in the Skeletal and Soft Tissue of Humans* 309  
*The Impact of Disease Environments: Variation in the Human Immune System* 311

<i>Blood Groups Vary Within and Across Populations</i>	312
<i>Most Genetic Variation Is Found Within Populations</i>	314
Human Biological Diversity Is Best Explained Using a Biocultural Approach	315
<i>Natural Selection and Human Cultural Behavior</i>	316
<i>Examples of Selection and Adaptation in Human Variation</i>	317
Race Is A Very Poor Way to Describe Variation In <i>Homo Sapiens Sapiens</i>	321
<i>What Is the Evidence Regarding Biological Races in Humans?</i>	322
<b>Connections: Is High Blood Pressure a Black Thing?</b>	324
<i>There Is a Scientific Study of Human Biological Variation</i>	325
<i>Why Does the Notion of Biological Race Persist?</i>	326
<i>A Very Brief History of Racism</i>	326
<i>Modern Notions Are Also Due to a Lack of Context</i>	328
What We Know/Questions That Remain	331
Summary	332
Critical Thinking	332
Resources	333
References	334

## **Chapter 11 The Present and Future of Human Evolution 337**

How Do We Study Human Behavioral Evolution?	338
<i>Sociobiology</i>	338
<i>Human Behavioral Ecology (HBE)</i>	339
<i>Evolutionary Psychology (EP)</i>	339
<i>Dual-Inheritance Theory (DIT)</i>	340
<i>Biocultural Approaches to Studying Modern Humans</i>	341
<i>A Modern Approach to Studying the Evolution (Past and Future) of Human Behavior</i>	341
Humans Are Still Evolving	343
<i>Diseases and Modern Humans</i>	343
<b>Connections: Can Evolutionary Perspectives Be Applied to Modern Medicine?</b>	346
<i>Cultural Patterns Influence Morphology</i>	348
Culture, Evolution, and the Future: Where Are We Headed?	352
<i>Human Densities and Global Population Are Dramatically Different Today</i>	352
<i>Genetic Manipulation Can Influence Our Evolution</i>	356
<b>Connections: Where Is That Banana From?</b>	357
<i>Some of Our Behavior Reflects Adaptations</i>	357
Understanding Biological Anthropology and Understanding Ourselves	358
What We Know/Questions That Remain	359
