

Level 4 – Level 4 of *Nursing Documentation Using Electronic Health Records* includes chapters 12, 13, and 14. In these last chapters students learn to perform more complex EHR documentation functions. Level 4 contains the EHR capstone section. Chapters 13 and 14 present the students with case studies that require them to navigate through all the screens of SpringCharts as they build Nurse Notes for multiple patients with various disease processes.

Chapter 13 – Applying Your Knowledge

Chapter 13 is the beginning of the EHR capstone section of the text. No new information is introduced in the last two chapters. In this chapter, students are presented with 12 exercises that take them through all the main screens of the EHR program as they document Face Sheet information, build Nurse Notes, import documents, and print Nurse Notes. Screen shots are given to the students throughout the exercise so they can check their accuracy with the SpringCharts program. This is preparation for Chapter 14 where no coaxing on appropriate placement of items in the EHR program is provided.

Learning Outcomes

When you complete Chapter 13, you will be able to:

13.1 Use all aspects of the SpringCharts program successfully.

Note: There are no screen shots supplied in the Instructor's Manual for chapter 13. The screen shots are placed in the text so the students can check their own accuracy as they perform the twelve exercises.
